

## Game Developer Assignment

Please create a new project from scratch and complete the 3 tasks below.

### 1. "Ace of Shadows"

Create 144 sprites (NOT graphic objects) that are stacked on top of each other like cards in a deck. The top card must cover the bottom card, but not completely.

Every 1 second the top card should move to a different stack - the animation of the movement should take 2 seconds.

### 2. "Magic Words"

Create a system that allows you to combine and render text and images. Use it to render a dialogue between characters with the data taken from this endpoint:

<https://private-624120-softgamesassignment.apiary-mock.com/magicwords>

### 3. "Phoenix Flame"

Make a particle-effect demo showing a great fire effect. Keep the number of images at max 10 sprites on the screen at the same time.

## Technical requirements:

- Write your code in **TypeScript** and use **pixi.js** (v7) for rendering.
- Each task should be accessed via an **in-game menu**.
- Render responsively for both **mobile** and **desktop** devices.
- Display the **fps** in the top left corner.
- Run the application in **full screen**.

We evaluate your **project structure**, **architecture**, **readability** and **documentation** of your code. But as game developers we also deeply care about the **creativity**, visual **aesthetics** and **playfulness** of your solution :)

**Submit your solution within 24 hours.**

Please provide sources in a **git repository**  
and a **link** to the hosted web version of the **final build**.

All the best 🚀

Your Softgames Team
